

WWTP HTML5 Live and Post Contest Reference Guide

Setting up a new live contest

1. Copy all files and folders *copy_live_contest* folder to the new contest folder (ie. mar-apr-2013).
2. Replace *photo.jpg* with the new jpeg.
3. Test it and you're done!

Note: The 'output' folder is where the submission text and image files are stored.

Converting to post contest version with answer keys

1. Make a local copy of the *copy_post_contest* folder and replace *photo.jpg* with current contest image.
2. Edit *index.html* and *answer-key-positions.css* to update answer keys.
When editing make sure you click on the div tag, ie <div.answer.one>.
This will allow you to move the answers to their correct spot individually.
(See comments in source code for guidance.)
3. DO NOT save any changes to the *global.css* file.
4. Rename *index.php* to *index_expired.php* and the *assets* folder to *assets_expired* in the current contest (the last issue) folder on the FTP server.
5. Upload new files*. The post contest index file is *index.html* – do not rename it *index.php*.
6. Test it and you're done!

**It's not necessary to overwrite 'photo.jpg' when uploading.*

HTML/CSS hotspot answer example

HTML answer div example:
(*index.html*)

```
<!-- Answer 1 hotspot -->

<div class="answer one">
  <div class="hotspot"></div>
  <div class="answer-text">
    <ul>
      <li>Answer 1 text.</li>
    </ul>
  </div>
</div>
```

CSS hotspot/answer placement example:
(*answer-key-positions.css*)

```
.answer.one {
!   top: 0px;
!   left: 0px;
}
```
